

**NEWS RELEASE**  
**Production Statistics 2005**

The Statistical Institute of Jamaica reveals that the Jamaican economy showed fluctuation in output of goods for the period 2004 to 2005. In 2005 most export agricultural crops decline in output when compared to figures for 2004, while most domestic crops had increased output.

In Mining both alumina and bauxite recorded their highest output levels in ten years, while the manufacturing sector, reflect fluctuation in output for the various product groups.

The Production Statistics for 2005 will give additional information and may be obtained at our Distribution Office at 7 Cecelio Avenue Kingston 10.
